

Polyform Wets and AutoWets

WV1800DH, WVD1800AP

The 2000 wet series is the epitome of heavy duty, Duplex professional machines that have been giving users their best performance for more than 20 years. Like the full range of wets, the 2000 series has been enhanced by increased efficiency in terms of wet pickup – working better and quicker than ever before.

You will find the 2000's trundling over building sites, used by fire crews in fire and flood damage applications, in fact, wherever there is lots of water to be collected, or for continuous pumping operations, there you will find the 2000 auto pump models, and you literally will not find better.

EcoWet

A Better Product ... By Design

EcoWets

The EcoWet range of wet and dry machines falls into 4 clearly defined parts so as to allow a simplified selection of the "Right Machine for the Right Job"

WV370, WV470, WV380

With the full range, however, design and attention to detail are based on continuously improved products that have stood the test of time in professional use and they all reflect 15, or more, years of user experience, coupled with our high quality standards which are second to none in products of this type, ensuring long service life and total reliability.

Easy Carry Handle

300mm Pick-Up Nozzle

Safety Net Filter

Fold Down Transit Handle WV470

The three smaller machines provide a choice of capacity, construction and detail and are favoured either in small, self use applications or when they must be moved continuously from site to site. Everything about them is designed for simplicity... Wet or Dry.

Professional Machines for Professionals

Enhanced performance with 50% energy saving and superb performance

WV570, WV900

Large Rear Wheels

NuCable Plug System

WV570/WVD570

WV900/WVD900

Unique 900 Tip-Empty System

The mid range EcoWet 570 and 900 designs are classics in every respect both in design and manufacture and have now been raised to our full EcoWet 38mm (1 1/2") standard, providing performance enhancements allowing single motor models to perform to that of earlier twin motored units. Yes EcoWet means up to 50% energy saving, changing 2 motor models to simplex one motored operation.

Structfoam construction with stainless steel and high efficiency accessories ensure long life, total reliability with superb performance and economy.

Big Wets and AutoWets

WV1800DH, WVD1800AP

The 1800, big capacity models are simply unsurpassed within their field. The Structfoam construction is unequalled; a selection of one or two motor power options; 38mm (1 1/2") accessories in stainless steel and aluminium provide performance and economy standards, simply, as good as you can get.

Auto pump models provide for continuous operation as may be needed in the event of flood damage, pumping out literally as much water as you can take in.
